IN THE ABSTRACT:

Please replace the Abstract of the Disclosure originally filed with the above-identified patent application with the following new Abstract of the Disclosure:

ABSTRACT OF THE DISCLOSURE

A skateboard is constructed to provide a natural ride and good operability without adversely influencing a motor controller and batteries. The skateboard includes a board, wheels provided on a bottom side of the board at front and rear regions thereof, a motor controller for supplying the wheels with rotary power, a case provided on a bottom side of the board and housing the motor controller, and fixing bolts fixing an approximately central region of the case to the board, leaving front and rear end regions of the case free.
